

TANK SERVICES

Storage tank installation, maintenance and environmental protection

For businesses that store and/or transport fuel or other substances that require tank storage, keeping these tanks fit for purpose and in top condition is essential; to ensure smooth operations, prevent pollution incidents and stay in-line with legislation.

From tank design and installation, to cleaning, service and maintenance, plus environmental response should disaster strike, Adler and Allan has a nationwide team of experts, on-hand to take care of all your tank related needs.

Tank services

Adler and Allan has many years' experience dealing with all types of storage tanks, from retail forecourts to major refinery and military holding tanks. Our services cover all aspects of tank operation, including:

- Legislation compliance
- Tank installation and build
- Tank cleaning
- Planned Preventative Maintenance
- Tank purging, decommissioning and removal
- Emergency response in the event of a spill

Tank legislation – let us help you comply

Oil storage regulations are increasingly stringent with the repercussions of non compliance costly and potentially damaging to the environment and a business' reputation. It is recommended that an OFTEC survey is conducted out once a year involving an audit that covers:

- Above ground tanks
- Bunds
- Leak detection and overfill protection systems
- Gauges and high-level alarms
- Spill kits

Adler and Allan can help complete this survey and carry out any maintenance work required as a result – we also inspect tanks to EEMUA 159, Level 2.

Tank installation and build, including bespoke fabrication

We provide tank installation and build services, from fitting durable plastic fuel tanks to designing and fabricating bespoke steel tanks. Our bespoke steel tanks feature 110% enclosed bunding and above-liquid-level connections for maximum safety.

Prior to installation, we can carry out a full site survey and make recommendations on the best material, configurations and pollution-prevention measures. Once tank installation is complete, Adler and Allan fully guarantees the product and offers expert after-sales service, from flexible one-off callouts to a comprehensive contract maintenance programmes.

We also provide a comprehensive range of optional extras including pumps, gauges, alarms and over-fill protection, plus fuel tank, dispensing pump and metering hire.

Tank cleaning – mobile, manual and automated

Adler and Allan delivers mobile cleaning for all types of storage tanks; from retail forecourts to major refinery and military holding tanks. Our tank cleaning services are extremely cost-effective, using the most advanced tank cleaning technologies available to ensure downtime is kept to a minimum.

- Manual tank cleaning by highly trained operatives, including cold cutting techniques, uplift and fuel transfer where necessary.
- Automated tank cleaning using powerful remote-controlled mechanical washers to speed up the cleaning process while reducing man-entry costs, such as scaffolding.

Planned Preventative Maintenance – prevention is better than cure

To comply with legislation, prevent spills and unnecessary downtime, a Planned Preventative Maintenance (PPM) programme is essential. We recommend an initial assessment with specialist engineers from each of our divisions, in order to ascertain the precise specification of a site, including equipment requirements and local conditions. As part of our PPM assessment, we will provide a full environmental asset list and a snapshot of equipment status.

Tank purging, decommissioning and removal

Exceptional care must be taken when decommissioning and/or purging potentially unstable tanks; a high risk task that can cause pollution and even explosions. Adler and Allan provides environmentally sensitive tank purging and waste removal services, exceeding all relevant health and safety guidelines.

We can deliver temporary mothballing, through pipe disconnection and water filling, or permanent tank decommissioning. Adler and Allan specialises in complete tank removal in both above and below ground scenarios.

Adler and Allan's PPM Checklist:

- Interceptors and site Gullies
- Oil storage surveys and maintenance
- Fuel compliance, testing and polishing
- Emergency spill response and spill contingency planning
- Emergency fuel supply

By taking a proactive approach to maintenance, businesses will save in the long term by keeping equipment operational for longer and preventing breakdown.

Pollution prevention and emergency response

As the UK's leading emergency spill responder, with over 20 depots nationwide, Adler and Allan is well placed to deal with any environmental incidents that may occur – risks faced by all sites that store potentially harmful substances in tanks.

We offer Emergency Response contracts which provide 24 hour, 365 days a year support, ensuring businesses act quickly in the event of a spill. To help prevent disaster in the first place, we can help draw up spill and pollution control plans, in accordance with HSE guidelines.

In addition, Adler and Allan supplies spill kits and recovery equipment, allowing businesses to act quickly in order to minimise damage and environmental pollution.

National Coverage

With highly trained teams, specialist equipment and vehicles, and a nationwide network of depots, the Adler and Allan Group has grown to become one the UK's leading emergency response service providers and oil and environmental services specialists.

- Waste Facility
- A&A Service Centre
- Alliance Partner
